

Your Indoor Air Quality Company

# 10 Steps to a Professional Air Duct Cleaning Job!

## Step 1. Equipment

We have multiple choices to bring you the best in duct cleaning equipment. We have truck mounted vacuum power, gas powered portable, and/or electric powered portable systems.

No air duct is too large or inaccessible for our equipment selection.

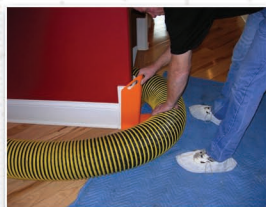

## Step 2. Qualified Personnel

We are a NADCA Certified Member company. Trained professional Technicians cleaning your air ducts to the national standard.

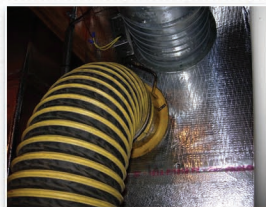

## Step 3. Complete & Protected Setup

Air duct cleaning will not begin until your floors and property are protected. Shoe covers are worn while indoors.

## Step 4. Negative Air

An 8" vacuum hose is attached to both the supply system and return side (one at a time) during the cleaning process to pull debris, dust, and allergens back to our power vacuums.

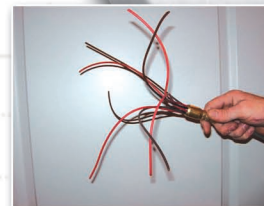

## Step 5. Hand Cleaning

Air registers are removed on the supply and return side for hand cleaning and entry of cleaning into the air ducts (unique vents or heavily painted vents are discussed on a case by case situation for removal).

## Step 6. Scrubbing the Air Ducts

While pulling a large volume of air towards our vacuums we now send scrubbing tools down each duct.

## Step 7. Trunks & Plenums

Main air duct lines on both the supply and return are cleaned all the way back to the plenums of the HVAC unit.

## Step 8. The HVAC Unit

The A/C coil, fan and heat exchanger are inspected for cleaning. When needed these services are available using EPA registered products.

## Step 9. Sanitizing the Air Ducts

Air ducts are sanitized using only EPA registered products specifically designed for use in air ducts to treat for mold and bacteria.

## Step 10. A Written Post Report

A follow-up report with the details of your cleaning project is then sent to you completing your project.
